Restoring defaults for pdf995

Applies to: *Auction!* **Version 4** and *Pdf995*. If *Pdf995* is no longer prompting for a the file name and save location using any software application including *Auction!*, a batch print to *Pdf995* in *Auction!* may have been interrupted before completion.

Step by Step Instructions

1. Locate **origPdf995.ini** in **C:\Users\Public\Documents\Auctions\PDFs** and rename **Pdf995.ini**. Then right click on **Pdf995.ini** and choose copy.

2. Browse to:

    a. In 64 bit computers C:\Program Files (x86)\pdf995

    b. In 32 bit computers C:\Program Files\pdf995

3. Open the **res** folder.

4. Paste the Pdf995.ini file into this folder. It will replace the existing file by the same name.

OR

Uninstall *Pdf995* from the control panel of the computer and then re install *Pdf995* to correct the problem.

Background: *Auction!* Version 4 allows the saving of multiple invoices, receipts or statements to individual pdf files using Pdf995. *Pdf995* must be installed on the computer to save multiple individual documents to individual pdfs in batch. Pdf995 is a free shareware application that can be downloaded at pdf995.com.

When using *Pdf995* to save individual reports or documents created in *Auction!* and in other software applications, *Pdf995* will prompt for a file name and save location. An exception happens when saving many *Auction!* documents at once into individual pdf files. In this case, *Auction!* will create a folder and name it. For example when saving invoices as pdfs the folder will be named **Invoices_YYMMDD_hhmmss** and will be saved in **C:\Users\Public\Documents\Auctions\PDFs**. The folder will have individual pdfs for each record and the name of each pdf will be unique. For instance, the name of each individual invoice pdf will contain the name of the household to which the invoice applies.

Once the process of saving all the pdfs is complete, *Pdf995* will return to the default setting and when saving any individual document using *Pdf995*, it will again prompt for the file name and save location as it has in the past.

However, if in the process of saving many pdfs at once, *Auction!* is closed or the process is stopped before all the pdf files have finished saving, *Pdf995* will not return to its default setting. Going forward, when saving documents in *Auction!* or any other software application, when *Pdf995* is chosen as the printer it will not ask for a file name or save location. It will continue to save all documents in **C:\Users\Public\Documents\Auctions\PDFs** and by default name the documents: document1, document2 etc.

Auction! saves a copy of the original default settings for Pdf995. If the process is allowed to finish, it resets the default. If the process is interrupted the reset does not occur automatically.

The above instructions are for a manual reset of *Pdf995* to its default parameters so any pdf files printed using *Pdf995,* other than batch documents in *Auction!,* can be named and the save location can be determined by the user.
